❋ Cascala

Streamline Hospice Intake with AI-Driven Clinical Summaries

Cascala delivers a clinically responsible, AI-enabled decision support platform for post-acute care—helping hospice providers and their referral partners identify eligible patients earlier, streamline intake, and deliver consistent, high-quality end-of-life care. By providing real-time risk insights, staffing guidance, and automated referral workflows, Cascala helps hospices improve timeliness of admission, reduce missed or delayed referrals, and strengthen both operational and financial performance.

18
days is the median length of stay for hospice patients in the U.S.

~35%
of hospice cases reported to involve late referrals.

45%
of hospice agencies indicating staffing shortages or workforce pressures as a major operational challenge.

20–25%
of hospice patients report or experience significant pain-management or symptom-control gaps.

How Cascala Helps
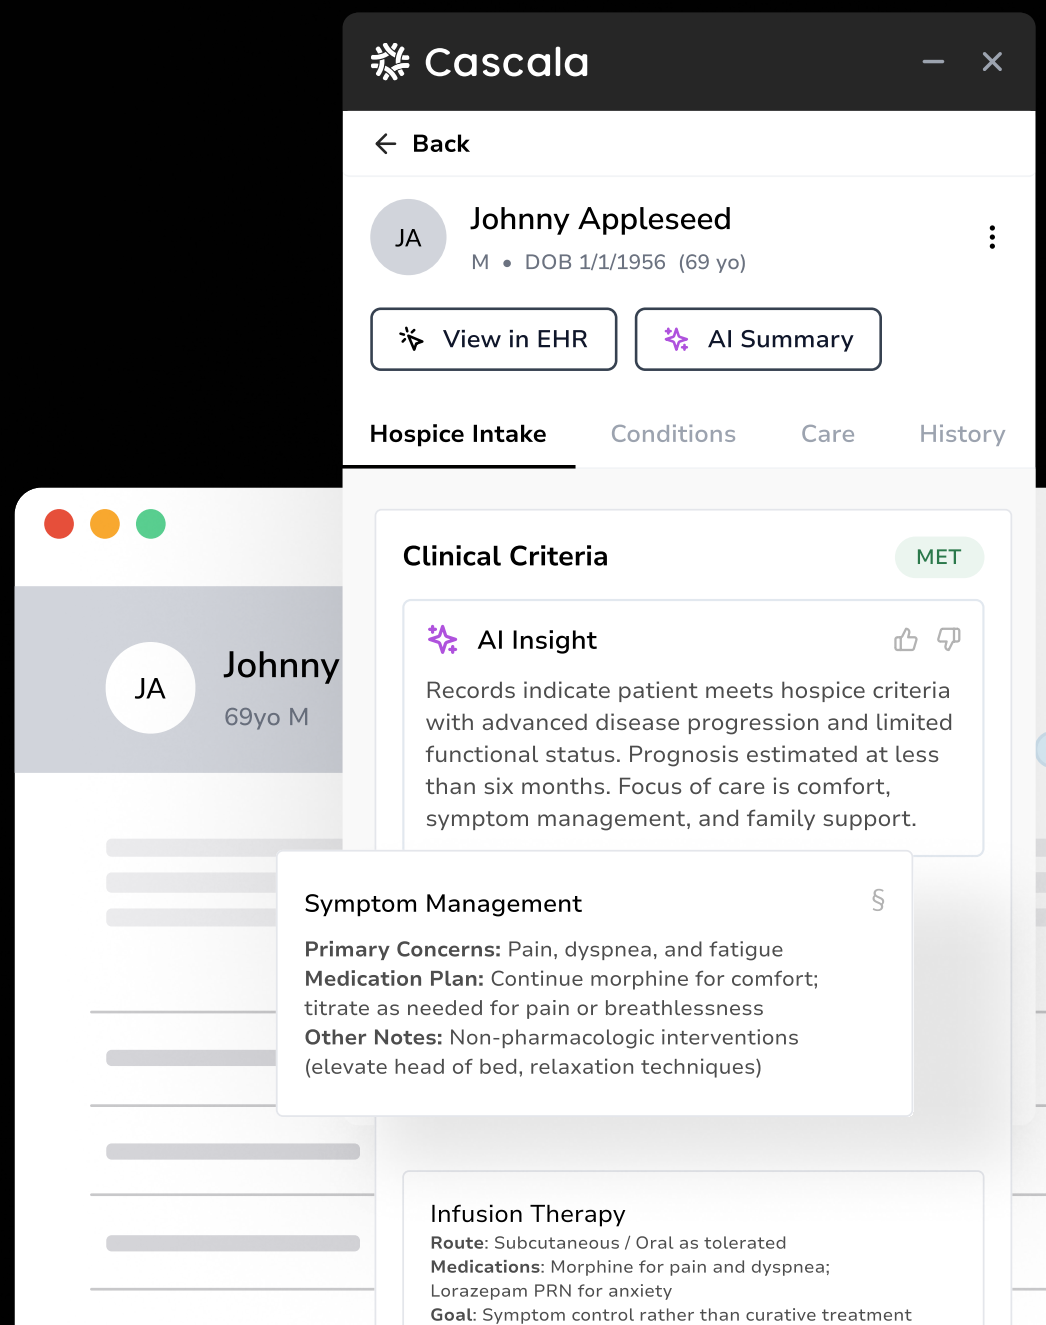

✓ **Structured Data Extraction**

Generate concise, clinician-ready summaries from referral packets

✓ **Eligibility Insights**

Highlight clinical complexity, medication considerations, and psychosocial needs

✓ **Integrated verification workflows**

Confirm coverage and support timely, compliant start-of-care

Hospice Intake | Conditions | Care | History

Clinical Criteria MET

✦ **AI Insight** 👍 👎

Records indicate patient meets hospice criteria with advanced disease progression and limited functional status. Prognosis estimated at less than six months. Focus of care is comfort, symptom management, and family support.

69yo M

Symptom Management §

Primary Concerns: Pain, dyspnea, and fatigue
Medication Plan: Continue morphine for comfort; titrate as needed for pain or breathlessness
Other Notes: Non-pharmacologic interventions (elevate head of bed, relaxation techniques)

Infusion Therapy

Route: Subcutaneous / Oral as tolerated
Medications: Morphine for pain and dyspnea; Lorazepam PRN for anxiety
Goal: Symptom control rather than curative treatment

CARE Transitions Platform

✻ Clarity™

A data-curation and AI-summarization engine that transforms fragmented medical records into a concise, contextual 360° patient snapshot at each transition point.

- ✓ Clinical Data Curation
- ✓ AI-Enabled Summarization
- ✓ Handoff Reports

✻ Continuity™

A longitudinal intelligence layer that maintains a living, risk-stratified view of every patient across settings and stakeholders, surfacing evidence-based interventions and tracking follow-ups.

- ✓ Patient 360°
- ✓ Real-time risk identification
- ✓ Intervention library

✻ Copilot™

A unified insights & analytics suite that decodes clinical and operational data into clear narratives, performance metrics, and predictive forecasts for decision-makers.

- ✓ Stakeholder Activation
- ✓ Browser Extension
- ✓ Copilot Desktop App
- ✓ Copilot Chat Bot

Proven Business Impact

45% faster admission decision time

↓29% agency-staff hours in first 6 months

↑12% new referrals from hospital partners

↓13% avoidable readmissions among high-risk patients

What Sets Cascala Apart

✓ **AI-Generated Clinical Summaries & Intake Assessments:**
Cascala synthesizes complex patient data into clear, actionable summaries — streamlining intake reviews, reducing referral leakage, and accelerating census growth.

✓ **Adaptive Workflow Integration:**
Seamless integration into existing workflows minimizing disruption and maximizing usability. Fewer system toggles and less manual re-entry for faster admissions and lower administrative costs.

✓ **Real-Time Risk Identification at intake:**
Surfaces infection control, wound care, dialysis, medications, infusion therapy, and behavioral risks so your teams can prepare appropriately – preventing costly complications and protecting reimbursement tied to quality.

✓ **Efficiency at Scale:**
Reduce administrative burden and automate routine tasks, enabling your clinical teams to operate more effectively and focus on direct patient care to enhance outcomes, operational efficiency, and long-term financial health.
